HEF4086B gates 4-wide 2-input AND-OR-invert gate

Product specification
File under Integrated Circuits, IC04

January 1995

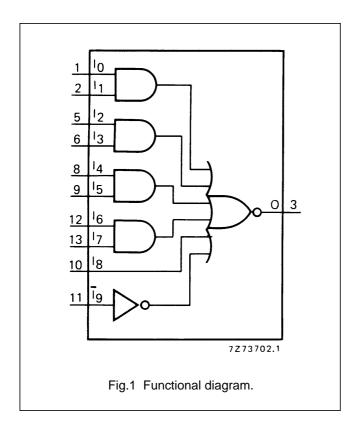

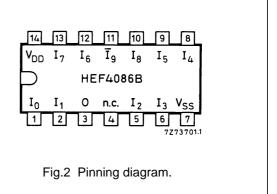

4-wide 2-input AND-OR-invert gate

HEF4086B gates

DESCRIPTION

The HEF4086B is a 4-wide 2-input AND-OR-invert (AOI) gate with two additional inputs (I₈ or \bar{I}_9) which can be used as either expander or inhibit inputs by connecting them to any standard LOCMOS output. A HIGH on I₈ or a LOW on \bar{I}_9 forces the output (O) LOW independent of the other eight inputs (I₀ to I₇). The output (O) is fully buffered for highest noise immunity and pattern insensitivity of output impedance.

HEF4086BP(N): 14-lead DIL; plastic

(SOT27-1)

HEF4086BD(F): 14-lead DIL; ceramic (cerdip)

(SOT73)

HEF4086BT(D): 14-lead SO; plastic

(SOT108-1)

4-wide 2-input AND-OR-invert gate

HEF4086B gates

APPLICATION INFORMATION

Figure 4 shows two HEF4086B ICs connected to obtain an 8-wide 2-input AOI function. The output (O_A) of the first IC is fed directly into the \bar{I}_{9B} gate input of the second IC. Similarly, any NAND gate output can be fed directly into the \bar{I}_{9} gate input to obtain a 5-wide AOI function. In addition, any AND gate output can be fed directly into the I_{8} gate input with the same result.

Logic equation for Fig.4:

$$O_{B} = \overline{I_{0A} \cdot I_{1A} + I_{2A} \cdot I_{3A} + I_{4A} \cdot I_{5A} + I_{6A} \cdot I_{7A} + I_{0B} \cdot I_{1B} + I_{2B} \cdot I_{3B} + I_{4B} \cdot I_{5B} + I_{6B} \cdot I_{7B}}$$
