Dual 1-of-4 decoder/demultiplexer

HEF4555B MSI

DESCRIPTION

The HEF4555B is a dual 1-of-4 decoder/demultiplexer. Each has two address inputs (A $_0$ and A $_1$), an active LOW enable input (\overline{E}) and four mutually exclusive outputs which are active HIGH (O $_0$ to O $_3$). When used as a decoder, \overline{E} when HIGH, forces O $_0$ to O $_3$ LOW. When used as a demultiplexer, the appropriate output is selected by the information on A $_0$ and A $_1$ with \overline{E} as data input. All unselected outputs are LOW.

HEF4555BP(N): 16-lead DIL; plastic
